

SBM Bank (India) Ltd

Net Stable Funding Ratio: December 31, 2023 Net Stable Funding Ratio (NSFR) is a new funding requirement and aims to ensure a stable funding of the balance sheet. The purpose of NSFR is to ensure that the banks have sufficiently stable funding available. The aim of NSFR requirements is to restrict maturity mismatches between assets and liabilities and limit the reliance on unstable short-term funding to finance potentially illiquid long-term assets. The NSFR reduces long-term refinancing risk and assesses resilience over longer-term time horizon (over 1 year) of the Bank by measuring the extent of stable sources of funds with the Bank to fund its long term assets. The NSFR shows a bank's ability to manage structural liquidity risk over a one-year horizon. It ensures that a bank's long term illiquid assets are funded with a minimum amount of stable long-term funding.

Net Stable Funding Ratio (NSFR) is defined as amount of available stable funding relative to the amount of required stable funding.

1. Available stable funding (ASF) is defined as the portion of capital and liabilities expected to be reliable over the time horizon, which extends to one year.

2. Required stable funding (RSF) is defined as the assets and off balance sheet exposure requiring long term funding.

The amount of funding is a function of the liquidity characteristics and residual maturities of the various assets. NSFR is implemented effective from October 1, 2021 and the minimum regulatory requirement is 100%. An NSFR of above 100% means that the long-term illiquid assets are adequately funded with stable funding.

The NSFR at 140.35% as on December 31, 2023 is above the minimum regulatory NSFR requirement.
